

Telappliant® cloudStore™

With your business generating and storing increasing amounts of information it is essential that you have a secure and reliable method for backing up your important data. In the event of a disaster or security breach your data needs to be readily available to ensure business continuity, avoiding down time and potential loss of income. Telappliant cloudStore will back up all of your information to a fully managed, UK ISO certified data centres, using military grade encryption to keep your data secure. You can access your data whenever you need to and recover lost files in minutes.

Why Cloud backup?

Traditional backup methods such as disks, USB flash drives and external hard drives are all vulnerable to integrity errors during recording or recovery. Once backed up securely storing physical backups is difficult as they can be easily corrupted. cloudStore provides a stable interface for backing up and highly secure data centres for storage.

How it works

Set what you want to backup, the timings and frequency of backups and cloudStore will automatically back up your files to our data centre using your existing Internet connection. You can securely recover and restore any of your data at any time.

Ideal for

Enterprises of all sizes. cloudStore will keep your data safe, making it ideal for information-sensitive industries such as medical, accounting, law, consulting and finance.

Features

- Compatible with Apple Mac, Microsoft Windows, Linux and Sun Solaris - laptops, desktops or servers
- Back up any file type including email and database server files
- Back up your data automatically over a secure connection
- Provides continuous data protection - backups can be run every minute if required
- Archive copies can be kept for as long as required, subject to storage space allocation
- 256-bit military grade encryption is applied to all of your data to ensure complete privacy
- Data is compressed to reduce transfer times and storage space
- Data is always available online, 24 hours a day, 7 days a week
- Full UK business support

 **Cost effective** – Reduce your on-site backup costs by moving into the cloud. Backing up your data remotely reduces in-house maintenance, hardware and IT costs.

 **Fully secure** – Your data is protected by 256-bit encryption and stored at two geographically diverse ISO accredited UK data centres, so you can be assured your data is secure.

 **Compatible** – Our service is compatible with all major platforms including Windows, MacOS, Microsoft-based Servers, Hyper-V, Linux, Oracle, MYSQL databases and more.

 **User friendly** – Our easy to use management system requires no specialist training and scheduling automatic backups helps reduce data management time.

 **Scalable** – Storage capacity can be increased in seconds to meet changes in your data requirements.
